# CLINICAL EDUCATION

## Advancing critical care across the region

Boston MedFlight's Clinical Education Program provides advanced training for both our own clinicians and the hospital and transport teams we partner with. These offerings focus on high-acuity skills—including simulation-based learning, airway and ventilator management, and neonatal and pediatric transport training—that support safe, effective care for the sickest patients.

By sharing the expertise our crews use to care for more than 6,400 patients each year, our Clinical Education Program helps strengthen critical-care readiness across Massachusetts and New England. Your support expands access to this specialized training—including scholarship assistance for hospitals, EMS agencies, and community departments without dedicated education resources.

### Sponsor a Clinical Course

Support high-impact clinical education such as ACLS, PALS, NRP, CCEMTP, trauma certification, or neonatal specialty training. Your sponsorship covers tuition, materials, and instruction for participating providers.

### Community Training Scholarship

Offset the cost for a town, hospital, or EMS agency to attend a Boston MedFlight class or simulation event.

### Annual Critical Care Conference

For more than 20 years, our Annual Critical Care Conference has brought together EMS providers, nurses, and clinicians to learn from leading experts in high-acuity care. Held at Lahey Hospital, this day-long event offers cutting-edge education, CE credits, and access to leaders shaping the future of critical care.

### Simulation Lab & Scenario Training

Fund upgrades to our simulation technology, mannequins, monitors, airway devices, and high-fidelity scenarios that mirror complex real-world emergencies.
