NEONATOLOGY & PEDIATRICS

Supporting the smallest patients when every second matters

Nearly one-quarter of Boston MedFlight patients are infants and children—including more than 1,400 neonatal and pediatric patients each year. We are the region's largest neonatal transport provider, deploying specialized teams trained to care for fragile newborns who often weigh less than one pound.

New England faces growing shortages in pediatric inpatient and neonatal specialty care. As distances to specialized NICUs increase, rapid, expert transport becomes critical. Research shows that neonates who receive high-acuity care during transport have significantly improved outcomes.

Your support helps ensure that every child—regardless of income, geography, or medical complexity—receives lifesaving care.

Specialized Neonatal Education

Support the highly specialized education and training required for neonatal transport. Your sponsorship helps fund advanced clinical instruction, simulation training, and readiness preparation that ensure our teams can safely care for the most fragile infants during transport.

Transport Costs for an Uninsured Pediatric Patient

Support the full cost of transporting an uninsured pediatric patient so they can receive lifesaving care without barriers. Your sponsorship reinforces our mission to care for every patient—regardless of their ability to pay—and helps sustain the more than $7 million in free and unreimbursed care we provide annually.

Neonatal Clinical Equipment

Help fund vital tools such as NeoView imaging, Tecotherm therapeutic hypothermia units, thermal blankets, neonatal monitors, or ventilators—all essential for safe transport.

Isolettes

Support a fully self-contained neonatal isolette so teams can launch faster with everything ready 24/7. Includes an incubator with all the specialty medicines and equipment needed to treat our tiniest patients.
